ElectraTherm, Inc.
From: Loy Sneary, President/CEO
Gulf Coast Green Energy
Subject: Letter of Appreciation

June 18, 2014

John, on behalf of Gulf Coast Green Energy and our board of directors I want to express our most sincere appreciation to you and your entire Team at ElectraTherm for all of the support we receive from ET. As a Distributor and purchaser of the ElectraTherm Green Machine ORCs for almost eight years, our experience as the first and oldest ElectraTherm (ET) Distributor has been outstanding.

Because we have had the opportunity to work with ET from its infancy and throughout its development and growth, we know that ET is a company with top notch management, technical, and sales & service support staff. More importantly, the Technology of the ElectraTherm Green Machine waste-heat-to (WHP) power generator is light years ahead of the first Beta Unit that we installed at Southern Methodist University in 2008. The state of the art technical developments proven out during more than 200,000 hours of run time prove that the Green Machine is the most durable and reliable WHP generator in the world. Not only has the Green Machine developed into proven technology, it's 98% + uptime gives us complete operational and mechanical confidence as we deploy the Green Machine units which is crucial to our customers and to the future of our company.

The technical Team at ElectraTherm is arguably the backbone of the Green Machine technology and is its greatest asset. The Team has always been most responsive and are on a 24/7 call basis with us, which is extremely important to our customers. The quality of the Green Machine and the ElectraTherm Team gives us pride in representing ElectraTherm and is why the Green Machine is the only ORC that we represent.

Best regards,

A handwritten signature in black ink, consisting of a large, stylized 'L' shape with a horizontal line extending to the right.
